

Team Neutrino

Newsletter Week #5

Drive Train for Comp Bot

We tested the drive train in the hallway to make sure that it could switch from traction mode to the standard wheels.

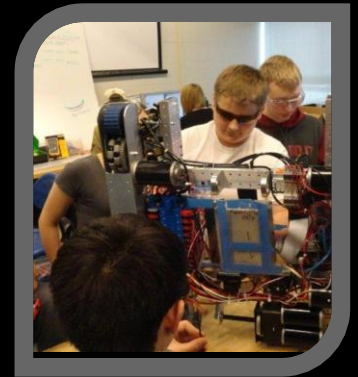

Chairmen's

We are now finished with the picture collages we need to submit, and we have a tentative final draft of the essay.

Sponsor Banner

We began to make the sponsor banner that will be hung in our pit underneath the Neutrino banner. Hopefully, this banner will be able to be used year after year.

Arms and Shooter

The arm and shooter were attached to the practice robot this week. It is all quickly coming together, which is good because we only have one more week! ☺

Pneumatics

This week, we attached the pneumatics to the robot so the drive train can function.

Coming Next Week: Some of the team is travelling to the Iowa Scrimmage, and some are going to the Science Center's Women in Science event next Saturday.
