## Jr. FIRST LEGO League

### Getting Started

Team Neutrino worked with Edwards Elementary school to start three all-girls Jr. FLL teams this year. Big thanks to Mrs. Green, the technology education teacher there, for making this possible!!

### Learn to Learn LEGOs

The girls started out by learning basic teamwork and problem-solving skills while building models with the [Learn to Learn](#) Lego kits.

2015

### Building the Models

The girls built LEGO models with motorized components of museums and libraries to show where and how we learn. The Lego Wizards built a working elevator using a pulley!

### The Teams

Instead of being called Team Up Quark, Team Up Quark, and Team Down Quark ☺, the girls chose to name their teams Lego Wizards, Ames Cyclones, and Seven Times the Science.

### Edwards FAB Faire

The teams presented their Show Me! posters and models at the first annual Edwards FAB(rication) Maker Faire. All the parents and teachers were very impressed at all they learned and accomplished this season!
