

Team Neutrino

October/November

FLL Mentoring

Twelve Neutrino members supported eight different FLL teams this year, helping the students build and code their LEGO robots and complete the assigned game challenges. We helped boost teamwork and FIRST values and prepared the teams for their competitions.

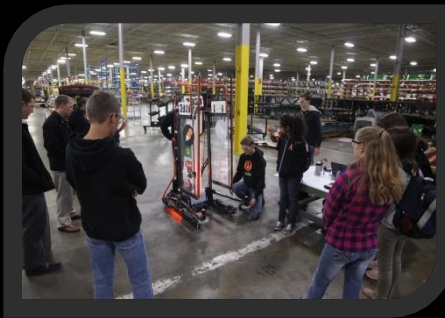

Cow Town Throwdown

At the end of October, we went back down to Kansas City for Cow Town Throwdown, an offseason competition. New members got a chance to see what a competition is like, and some of them even got to drive the robot! Our alliance won the competition!!

Quality Manufacturing Visit

This month we got to present our robot to Quality Manufacturing, which has provided large metal parts for us in the past. We had fun demonstrating our robot and also got a tour of their amazing laser cutting process!

Interstate Batteries Visit

Similarly, we got to visit and demonstrate our robot at Interstate Batteries. Michael, our new mentor, works there, making the company an even more valuable supporter of our team.
