

Team Neutrino

Newsletter Week #5

Mechanical

Quality parts finally arrived on Monday this week! CADD merged with mechanical to build the robot, and both teams have been hard at work on the robot this week.

The two teams prepared the Quality parts quickly, then began assembling the official robot. We assembled the shooter and drive train, then added the shooting mechanisms and began wiring the robot.

Programming

This week the programming group finished and finalized the shooter code, resulting in our shooting mechanism working on Saturday! We also continued work on image processing for the robot.

Bumpers

Kelsey, a 2014 ISU alumna, visited Ames on Saturday. She stopped by Sukup to say hi to the team and help us make bumpers! ☺
