

# Team Neutrino

## Newsletter Week #4

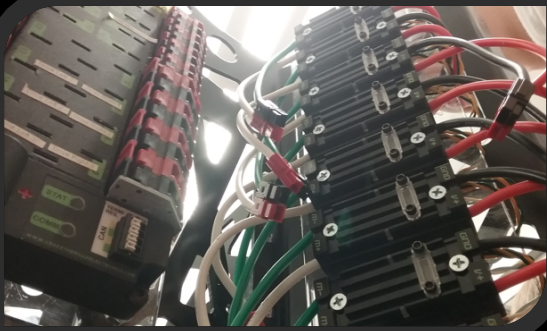

### Mechanical

Quality parts came! Mechanical team got both the practice and real robot frames riveted together, and various subsystems that they machined in-house have been fitted and have begun being tested.

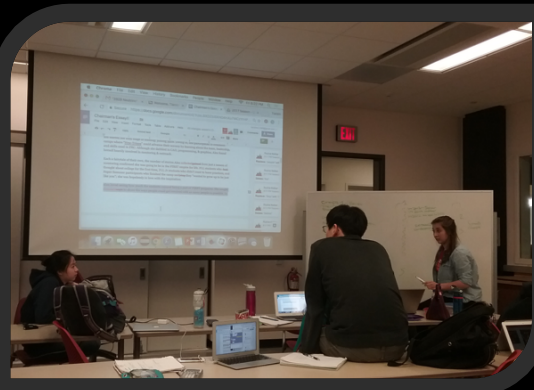

### Electrical

The swiftness of the completion of assembling the manufactured parts from Quality Manufacturing means the Electrical team has been hard at work wiring up motor controllers, radio, RoboRio, and the drive train. Things are progressing very quickly!

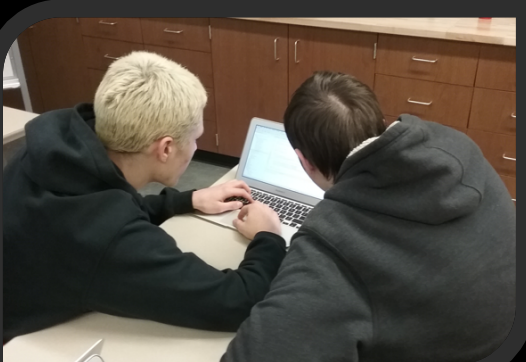

### Chairman's

The Chairman's Essay is almost done! The essay follows a princess named Alex and her adventure through Team Neutrino. The Chairman's team has been hard at work to make last edits!

### Programming

To quote programming manager Logan Peters, the Programming team has made "oodles!" of progress. They have been finishing up programming more specifically the subsystems of the robot in preparation for testing on working hardware.

**Coming Next Week:** Submitting Chairman's Essay and testing the Robot!
