

Team Neutrino

May – June

Maker Camp

Members of our team volunteered to help instruct the Maker Camp held at Edwards Elementary School. The students made various crafts including E-Textiles, duct tape Chromebook cases, and soldered circuit board kits from IEEE.

Super Summer

Team Neutrino taught three Super Summer classes: Mini Makers, Engineering 101, and LEGO Mindstorms. Students in the community ranging from first through eighth grade were involved.

CAD Camp

Our CAD training camp was taught by Benjamin Steward to help teach incoming new-trinos the basics of Solidworks before the build season begins. They designed a mini-bot which we will be taking to the Cow-Town Throwdown.

Programming Camp

Another training camp, the programming camp, was taught by Nicole Essner and Tianxin Xu to familiarize incoming students so they are prepared for the coming build season.
