

# Team Neutrino

## Week 1

### Kickoff

Team Neutrino got together for the 2019 FRC season kickoff on January 5th. We watched the live stream and got introduced to Destination: Deep Space. We spent the day planning and deciding our match strategy.

### Prototyping and CAD

The team brainstormed ideas on how to best design a robot for this year's challenge. In prototyping, we finalized the drivetrain design and made progress on panel manipulator prototypes. We also started to work on laying out the wheel ball intake and continued to work on the climber.

### Chairman's

We wrote the final draft of the Executive summary. We also decided on a theme for this year and finished the first draft for the Chairman's essay. We're a week ahead of schedule!

### Programming

The controls team worked on using a PixyCam for vision tracking for the white lines. We are also working on Lidar to map the field.

### Scouting

Team Neutrino recently made new scouting cards for this year's game. We also began training new members on the scoutmasters, our student designed scouting devices.

**Coming Next Time:** We are going to be assembling the drive train!
