

Team Neutrino

Week 6

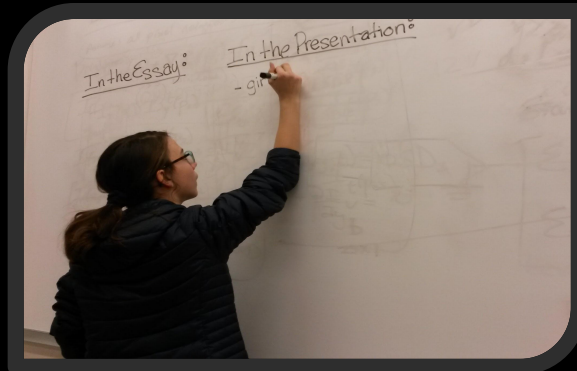

Assembly

A lot of progress has been made this week on assembling the robots. We have assembled the cargo and hatch mechanisms and made battery holders. We are working hard to get these robots ready for competition and the Robot Reveal.

Controls

This week the controls subteam finished wiring the practice bot and is almost done wiring the competition bot. We are also testing and developing vision systems to assist the drivers in placing game pieces.

Chairman's

The Chairman's team has been working on our presentation and writing our FIRST stories.

Graphics

The graphics subteam has been busy this week making the Build Season wrap video. We also created a new battery label system to keep better track of battery strength, usage, and age.
