

TEAM NEUTRINO

May-June Newsletter 2023

CelebrAsian Festival

In May, Team Neutrino demoed their robot at the CelebrAsian Festival in Des Moines by handing out candy, buttons, and stickers. This event was a great success, and an awesome way to kick off their 2023 offseason, as the team reached over 600 people! Aside from this, team members had a ton of fun exploring the event, which was full of fantastic food, music, and cultural opportunities.

End-Of-Year Party

At the end of the year party, Team Neutrino celebrated the Charged Up season by playing games and spending time with one another. As fun as the day was, its ending was bittersweet, as everyone had to say goodbye to the five graduating seniors. Their mentors and peers are sad to see them go, but grateful for all the memories they made together and so excited to see what they do next!

Intro Training Camps

Over the course of this summer, Team Neutrino will be offering six Intro Training Camps. These Camps teach aspiring members about Team Neutrino's subteams through demonstrations and hands-on projects. For example, at the Intro to Outreach Camp, students learned the ins and outs of outreach while creating the curriculum for the summer camp "Enrich, Empower, Excel."

Advanced Projects

In preparation for the upcoming season, Team Neutrino has initiated Advanced Projects to further develop abilities on both an individual and full team scale. These projects, ranging from designing a new arm for our current robot, to programming our new swerve drive, will help returning members grow stronger and more confident in their CAD, programming, and teamwork skills.
