

# TEAM NEUTRINO

## 2023 Week 4 Newsletter

### Team Apparel

This past Thursday, we received our apparel order! Members of the graphics sub-team spent time sorting and bagging everyone's orders. Team members, both old and new, were especially excited about the inclusion of hats in this year's apparel, as they haven't been available to order for the last three years.

### Controls Demo Day

This week, Team Neutrino's control and design subteams got together with the drive team to demo the test board. They communicated with each other about what needed to be accomplished, and the controls sub-team made a list of new things to update. Since then, the controls sub-team has been incorporating this invaluable user feedback into their design.

### Impact Video Storyboard

Over the last couple of weeks, the graphics and awards sub-teams have been working together to plan this season's Impact video. This video is one of the most important graphics projects during the build season and is part of our submission for the Impact (formerly known as Chairman's) Award. This week, the team finished the storyboard for the video!

### Assembly

With more parts manufactured and painted, members were finally able to start assembling our robot. They worked on the tower and drive train. On Saturday, they attached those parts, and, with the help of the controls sub-team, saw them in motion!
