

# TEAM NEUTRINO

## FIRST World Championship 2023

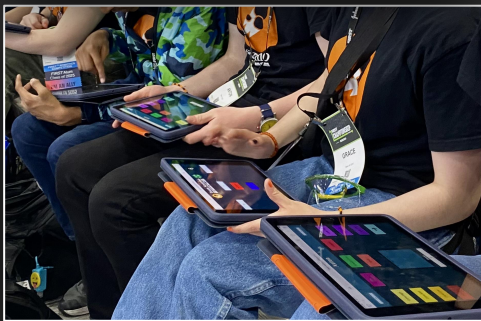

### Robot Game

In time for the FIRST Championship, we were able to introduce improvements to our scoring mechanism as well as manufacture spare parts. At the competition we competed with a lot of great teams and had a fantastic time full of learning. Members had the opportunity to explore the competition and meet other teams from all around the world.

### Conferences and the Innovation Faire

Champs is a fantastic opportunity for our members to learn from professionals at conferences, which go over various topics such as data analytics and computer science. Another opportunity at Champs is the Innovation Faire, which allows students to visit with companies and learn about the cutting edge technology being developed by leading members of the STEM community.

### Scouting

During this season, Team Neutrino has grown our scouting subteam to an all time high of 6 members. This allowed us to completely reprogram the app that we use to analyze other teams. This resulted in a much higher quality of data. The many dedicated members of our scouting subteam also greatly improved communication this year.

### Moving into the Offseason

As we conclude a successful 2022-2023 season and move into the offseason, the team is full of new leaders ready to step up. We have begun the recruitment process, with introductory meetings scheduled for aspiring members. While introducing new members, we also give great thanks to the members of the team who will be graduating this year going onto do great things.
