

# TEAM NEUTRINO

## FIRST World Championship 2025

### Robot Performance

Team Neutrino successfully accomplished our team goal of being a competitive robot at the international level by ranking 16th in the Hopper division. This was our team's best ranking at the Houston World Championships within the last 7 years of our whole team history!

### National Instruments Tour with Grace

Grace showed members of National Instruments, one of our sponsors, around the competition site. They got to see our robots in action and talk to team members in our pit area during the Championship! Thank you to Grace for being such a great tour guide. It was an honor to have a member of our team represent FIRST at the global level.

### Einstein Playoffs

Team Neutrino had a fantastic time watching Einstein playoffs and some members and mentors from Team 1710 came over to us while watching the Einstein playoffs. Two team members, Sarah and Morgan, joined a stadium-wide game of Simon Says. The performances were great with a group of breakdancers and a famous band that competed in America's Got Talent, Recycled Percussion, played.

### Side Quests

Champs was a fantastic chance for our members to learn about various topics such as design processes and outreach. We talked to numerous international and Iowa teams, gaining knowledge on mechanical and strategic aspects from some of the top teams in the world. Additionally, Team Neutrino gave tours to and invited Iowa FLL team Coding Goats to our stands, allowing them to experience FRC at the championship level.
