

TEAM NEUTRINO

May/June Newsletter

End of Year Party

On the 26th of May, team members gathered together at Emma McCarthy Lee Park to celebrate the end of another successful season! At the party, members enjoyed food and bonded through fun and casual games. Seniors gave speeches on their personal experience with Neutrino. The team also took the time to recognize hard-working individuals, celebrating their efforts and impact on the team.

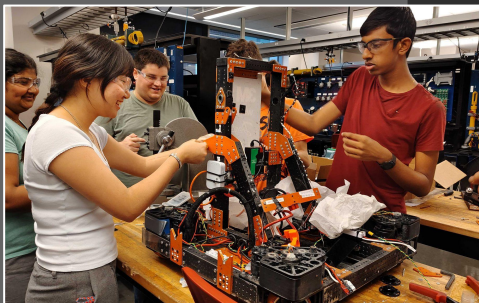

CelebrAsian

On Friday, May 23th, Team Neutrino attended the annual CelebrAsian event in Des Moines. Reaching many people, CelebrAsian posed a great opportunity for the team to not only share the passion of STEM with the community, but also allow team members to experience new cultures and traditions represented at the event!

FLL Blastoff!

FLL Blastoff! is a program that we are continuing this summer! We created this camp to make STEM more accessible to our community! FLL Blastoff! simulated a FIRST Lego League season and had a mock competition at the end of the camp. During the camp, students learned about programming, designing, building a LEGO robot, enhancing their overall STEM understanding!

Advanced Design and Controls Projects

We decided to make our 2024 robot, Valkyrie, into an L1 robot to compete in the Reefscape game! This will give members experience and prepares us for our offseason competition Clash in the Corn. The team will also gain valuable experience other advanced projects, in which member pick an area they are interested in to grow their skills.
