

# Team Neutrino

## September

### Mini Maker Faire

The Science Center of Iowa had its first ever Maker Fair! Organizations from around the state came to provide hands-on demonstrations to spread awareness of the maker movement. The robotics teams present included FRC #3928, FRC #4646, FTC #5126, and the ISU Lunabotics club.

### Quality Manufacturing Visit

To thank Quality Manufacturing for their support during the 2014 season, we brought our robot to their building and gave them a demonstration. They gave us a tour of their laser cutting process to show how they make the parts they donate in-kind.

### Welcome, New Members!

Team Neutrino had a booth at the Ames High School club fest to invite students to our introductory meeting. A week later, we told the new members about our team, gave them a demo of the robot, and showed them Boyd lab. We're excited for getting to know you this year!

### Sukup Hall Dedication

This month, ISU opened their new Biorenewables Complex. We worked with ISU to get space for our robot assembly in the new building, and so we displayed our robot at the dedication to show part of what the new building will be used for.

**Next month:** We will mentor 4 FLL teams and compete at Cow Town Throwdown!
