

Team Neutrino

Greater Kansas City

SWE Lunch

Neutrino members were given the opportunity to attend a lunch hosted by the Society of Women Engineers (SWE). After listening to several speakers, members had fun decorating stars and interacting with other teams.

Scouting

After working for several weeks on the scouting app, scouts were finally able to test the app that they created. We used QR code scanners to transfer data quickly. This allowed us to track other robots. Because of this, we were able to select other teams to join our alliance and win the Regional.

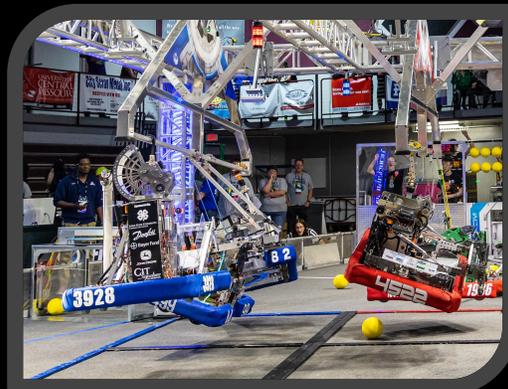

Engineering Inspiration

We won the Engineering Inspiration Award (sponsored by NASA), a prestigious award given to the team that advances appreciation for engineering in their community. Both this award and our regional robot win double-qualified us to attend the World Championship in Detroit.

First Regional Win!

For the first time ever in the team's history, we won our first regional competition which qualifies us to attend the championships in Detroit. We were captains of the third seed alliance and competed against the first seed alliance winning with a triple climb in the final match.

IOWA STATE UNIVERSITY
College of Engineering

JOHN DEERE

2020

Coming Next Time: We will be competing at the Iowa Regional March 26-28!!!
