

TEAM NEUTRINO

January 2021 Newsletter

Kickoff

This kickoff, team members met in a hybrid model. Some of the day was spent remotely, and some in small groups to minimize contact. As we entered our 10th FRC season, members excitedly planned our strategy for all of this year's FRC competitions, including Infinite Recharge at Home, a unique FRC game played remotely.

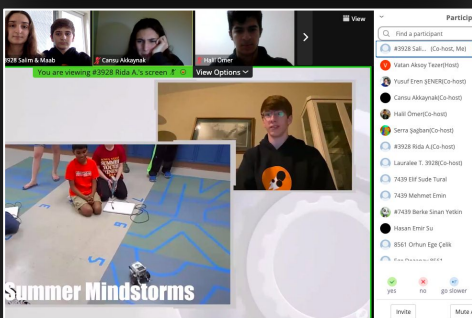

New Award Submissions

This season, Team Neutrino is submitting for the Innovation Challenge and Game Design Challenge Awards. These awards recognize teams who develop a business plan for an innovative consumer product in the fitness industry and design an original FRC game theme and competition field (respectively).

In-person Design Meetings

Since kickoff, we've met in small, in-person groups to compete in Infinite Recharge skills challenges. We are adapting our 2020 robot to compete in various challenges, based on last year's game. Once the team has completed the challenges later this season, we'll submit our scores to compete with other teams around the world.

International Winter Workshop

Two Neutrino members participated in a virtual outreach winter workshop hosted by Turkish FRC Team #7285, Sneaky Snakes. At the workshop, Salim and Maab presented for about 35 attendees all about outreach events, how to outreach, tips to get started, and answered questions that international teams had!
