

TEAM NEUTRINO

FIRST World Championship 2022

Winning Engineering Inspiration!

For the first time in Team Neutrino's history, the team won the Engineering Inspiration Award at the FIRST Championship in Houston among five other teams worldwide. The team was recognized for its tremendous impact on the community by spreading STEM through outreach events and projects. Team Neutrino became the first Iowa FRC team to win the Engineering Inspiration Award at the championship level.

Winning Dean's List!

After winning Dean's List at the Iowa regional, Leslie, a junior on Team Neutrino, won the Dean's List Award at the Championship in Houston. Leslie was one of only nine other students worldwide to receive this award and became the first Iowa FRC participant to win the Dean's List Award at the Championship. Leslie was recognized for her leadership and for her amazing contributions to the team.

Robot Rankings and Alliances

Team Neutrino worked extremely hard and performed exceptionally during the competition. The team was chosen as the third pick for the sixth alliance and continued to support our alliance partners throughout the matches. Our success was mainly due to students working together and staying committed in order to better the team.

Opportunities at The Championship

Several learning opportunities were available for students at the FIRST Championship. Members on Team Neutrino had the chance to meet with colleges from around the country such as MIT and explore countless work opportunities at places such as NASA. Many of the students enjoyed attending the conferences available, which helped the students learn about new topics and meet other international teams.
