

TEAM NEUTRINO

2022 Minnesota North Star Regional Newsletter

Regional Win

After an incredible weekend, Team Neutrino placed as the captains of the third seed alliance! Along with our alliance partners, teams 2987 and 6749, Team Neutrino was able to advance to the final round and win the tiebreaker, becoming the winning alliance at the 2022 North Star Regional. This achievement was made possible by the help of our generous sponsors and mentors who had supported us all season!

Chairman's Award

For the second year in a row, Team Neutrino is proud to have won the Chairman's Award! As the most prestigious award in *FIRST*, it recognizes exceptional teams in the areas of community outreach, sustainability, and passion for STEM. Now, 3928 is excited to be competing for the Championship Chairman's Award this coming week in Houston.

Scouting

Our scouting team was hard at work all competition long making our successes on the field possible. Many members have dedicated their time to scout other teams, and such efforts were incredibly useful during alliance selection. With a detailed data system we were able to select the best teams to join our alliance, as well as formulate match strategies.

Triple Qualification!

By winning the Engineering Inspiration Award at the Iowa Regional, alongside the Chairman's Award and regional win at the North Star Regional, Team Neutrino is one of few teams to have won each of these qualifying awards in 2022. This is the first triple qualification in team history! Team Neutrino is beyond excited to compete at the Championship event next week, April 20-23!
