TEAM NEUTRINO

Nov-Dec 2021 Newsletter

Cow Town ThrowDown

Team Neutrino was excited to attend the Cow Town ThrowDown, hosted by FRC Team #1730 in Lee's Summit, Missouri! Members were thrilled to meet other teams at an in-person event for the first in over a year—it was delightful to see how other teams had maintained their robot during the remote year, and we can't wait to see them again soon!

Winter Party

For the first time since before the pandemic, 3928 hosted our annual holiday party. Members and mentors alike partook in various holiday activities such as cookie decorating, a video game tournament, and an FRC-themed white elephant gift exchange. New members experienced Neutrino's family culture.

CADathon

The F4 CADathon is an annual competition where FRC teams design a robot for a fictional FRC game. Here at Team Neutrino, we use SOLIDWORKS as our primary CAD program, and this CADathon was a great opportunity to train some of our newer members. The team collaborated for a week to learn new CAD techniques.

Annual FLL Scrimmage

Every season, 3928 hosts a scrimmage event where local FLL teams prepare for their regional competitions. Neutrinos hosted mock project, core values, and robot design interviews, in addition to practice matches. First-year teams and those which took a COVID hiatus benefited from an unofficial competition prior their own.
