

TEAM NEUTRINO

FIRST World Championship 2026

Robot Performance

Team Neutrino successfully accomplished our team goal of fielding a competitive robot at the international level. We ranked 48th in the Milstein Division with consistent scoring and amazing autons. We couldn't have done it without our amazing pit reps, pit crew, drive team, scouters, and members bringing the team spirit to the stands!

John Deere Tour with Anika and Jackson

Anika and Jackson showed members of John Deere, one of our sponsors, around the competition site. They got to see our robots in action and talk to team members in our pit area during the Championship! Thank you to Anika and Jackson for being such great tour guides. It was an honor to have members of our team represent FIRST at the global level.

Einstein Playoffs

Team Neutrino had a fun time watching Einstein playoffs. Seeing the top teams compete was a great learning experience for our members. Between the matches, we watched very entertaining breakdancing performances and an intense game of Simon Says.

Side Quests

Champs was a fantastic chance for our members to learn about various topics such as design processes and outreach. We talked to numerous international and Iowa teams, gaining knowledge on mechanical and strategic aspects from some of the top teams in the world. We even participated in a few dance battles along the way 😊.
